

# Installation options for AIRPURION® active plants

The standard scope of delivery of a plant AIRPURION active includes one of the below illustrated assembly systems.

## Assembly via mounting rack

The assembly via mounting rack enables the operation in situations with small room heights.

The mounting rack is completely pre-assembled and consists of two aluminium bars including screws and wall plugs.

#### Advantages

- Assembly in case of small room heights
- High stability in case of strong air convection
- Pre-assembly for easy installation
- Replacement of the UV lamp without deconstruction of the mounting rack

## Assembly via wire suspension

The assembly via wire suspension enables a flexible adjustment of the distance to the ceiling.

Therefore the convection of air within the room can be optimal used.

The wire suspensions are completely pre assembled.

### **Advantages**

- Flexible adjustment for optimal utilization of the convection of air
- Pre-assembly for easy installation
- Replacement of the UV lamp without deconstruction of the mounting rack
